Il sistema letto Tommy si compone da 4 diverse misure di testata, che si sviluppano in orizzontale e da 5 basi letto che assolvono in modo completo a tutte le esigenze di spazio e comfort. Tutte le testate e le basi letto sono interamente sfoderabili e intercambiabili. Le testate sono indipendenti fra loro e possono essere assemblate creando cadenze personalizzate, arricchite dai molti tessuti presenti nel catalogo Tumidei. La base letto è composta da un box “Sommier” per dare il massimo confort e da due piedi in fusione di alluminio, che possono essere personalizzati con tutta la gamma di laccature Tumidei o ricoprirsi in tessuto grazie al rivestimento del piede tessile.

TETRIS / Air Purification System

Tetris è un innovativo sistema di puricazione naturale dell'aria per ambienti indoor.
Il sistema Tetris si basa sul principio del Fitorimedio, una tecnologia che utilizza le piante per la mitigazione di inquinanti, presenti nel suolo, nell'acqua e nell'aria. La pianta nel sistema Tetris diventa un vero filtro, grazie alla presenza di microorganismi nell'apparato radicale è capace di metabolizzare gli agenti nocivi presenti nell'aria.
Attraverso una ventilazione meccanica forzata il sistema aumenta il flusso d'aria all'interno della pianta e ne amplifica l'efficacia in modo esponenziale.
Un vaso smart, capace di connettersi attraverso Wi-Fi ai comuni devices e gestibile attraverso un applicativo mobile. Tetris garantisce un' esperienza d'uso real-time, attraverso l'App l'utente è in grado di:
Monitorare la reale presenza di agenti inquinanti nell'aria che si sta respirando;
Programmare l'accensione e lo spegnimento a seconda del livello di inquinanti rilevati;
Monitorare il livello di temperatura e umidità, parametri fondamentali al fine di garantire un buon comfort ambientale.
E disponibile in tutti i laccati della gamma Tumidei, nella versione con o senza piedini.

Tetris is an advanced natural air purification system for indoor spaces.
The Tetris system is based on the fundamentals of the phytoremedation, a technology that uses plants for the mitigation of pollutants in soil, water and air. The plant inside the Itair system becomes a real filter, and thanks to the microorganisms in the roots, it is able to process the harmful agents present in the air.
Through a mechanical forced ventilation system, it increases the air flow inside the plant and it exponentially amplifies the effectiveness.
A smart vase, able to connect via Wi-Fi to the most common devices and manageable through a mobile application. Itair ensures a real-time user experience, thanks to the app the user can:
Monitor the real presence of contaminants in the air that you are breathing;
Program the turning on and off depending on the pollutants level measured.
Monitor the level of temperature and humidity, fundamental parameters in order to ensure a good environmental comfort.
